## Customer Reviews

Has your dog been 'tired', shown mobility problems, had a change of eating habits, shown loss of body functions, seemed distracted, or displayed other subtle signs of poor health? Perhaps your dog is diabetic, and has diminished capacity due to an unseen problem! If your pup is acting strangely and acting as if it isn't feeling well, please don't assume it is just a temporary phase! Don't lose your precious pet due to an unseen illness, when all your dog needs is your love and care!! This book is for you if your dog has been recently diagnosed with diabetes, has unusual behavior, or if your dog is suspected to be diabetic! My precious dog began to show serious 'symptoms' of old age on the Friday before Christmas, 2012. She became weak, and upon closer inspection, she showed signs of losing her bodily functions. I rushed her to the veterinarians' offices where they 'worked her into' their busy, harried holiday schedule. Tests were run, x-rays were taken, all on a Friday

afternoon. It was Friday, before Monday, which was Christmas Eve, and her tests results were given to me via phone call in the evening. "Your dog is diabetic, so please bring her in on Wednesday after she has fasted all night for further testing". What? I had to wait until Monday for more tests? Yes, ..... Fear gripped my guts as I feared all of the bad things this prognosis could bring. What was about to happen to my world? How could I possibly care for a diabetic dog? Christmas looked bleak and scary! How could I endure the 'wait'? I immediately got on and found this book! I ordered it immediately late on Friday afternoon!! On Wednesday, the book arrived!! It was the morning my dog was taken into the veterinarians' office for more tests!
